

Offshore Motus Data Framework

Stakeholder Workshop

November 29, 2021

Pam Loring

U.S. Fish and Wildlife Service

Division of Migratory Birds, North Atlantic-Appalachian Region

Project Team

USFWS Migratory Birds: Pam Loring, Scott Johnston

Biodiversity Research Institute: Kate Williams, Andrew Gilbert, Evan Adams, Julia Gulka, Ed Jenkins

Univ. of Rhode Island: Peter Paton, Doug Gobeille, Erik Carlson, Rob Deluca

Birds Canada: Stu Mackenzie

NYSERDA (funding): Kate McClellan Press, Gregory Lampman

Overall project goal:

To develop standardized protocols for using automated radio telemetry to monitor birds and bats in offshore environments.

Peter Paton, URI

Overall Project Components

- **Monitoring Framework** - tags and study design
- **Guidance Document** – offshore Motus stations
- **Online Study Design Tool** – map detection coverage
- **Simulation Study** – model animal movement data
- **Motus Data Framework** – centralized portal for data management, coordination, and summary reports

Workshop goals:

- **Introduce Motus Data Framework**
- **Feedback on offshore Motus portal (under development) and automated reports**
- **Opportunities for further engagement**

Agenda (times in ET)

1:10 – 1:40: Motus Presentation & Demo (Stu Mackenzie and Lucas Berrigan, Birds Canada)

* Please put any questions in chat

1:40 – 1:55: Discussion/Q&A

1:55 – 2:10: Short break/web platform exploration

2:10 – 2:40: Breakout groups

2:40 – 2:55: Report out/discussion

2:55 – 3:00: Next steps

Data Products and Services

Infrastructure and Technology

'Motus' Tags:

- Lotek Nanotags (150, 151, 166 MHz)
- CTT LifeTags/PowerTags (434 MHz)
- ~\$2-300 USD per tag

Receivers:

- Sensorgnomes (DIY* open source)
- CTT SensorStations (SG inside)
- Lotek SRX series

SRX800-M/MD-Series

SRX800-D-Series

Connectivity – GSM, WiFi,

- Cost per station \$4-10K USD

Discovering Unknown Migrations: The Atlas of Migratory Connectivity for the Birds of North America

Long-billed Curlew *Numenius americanus*

MIGRATORY CONNECTIVITY
Subsistent connectivity. Bird migration and habitat tracking data have revealed the routes that connect nesting connectivity between breeding and wintering areas with a major divide along the Rocky Mountains.

SPECIES INFORMATION AND CONSERVATION STATUS
The species is distributed in North America along the Pacific coast, with the highest densities in the Pacific Northwest. Breeding occurs in coastal wetlands and marshes, and wintering occurs in coastal areas in the western United States and northern Mexico. Curlews breeding in the Pacific Northwest include the western Curlew, the northern Curlew, and the western Curlew. The western Curlew is a common wintering species in the western United States and northern Mexico. The northern Curlew is a common wintering species in the northern United States and northern Mexico. The western Curlew is a common wintering species in the western United States and northern Mexico.

ATLANTIC OFFSHORE WIND ASSESSMENT PORTAL

GOALS:

- Collaboration platform & data hub for offshore wind monitoring projects
- Ensure open and robust data access, storage, and standardization
- Provide summary-level reports of information needed to support offshore wind assessments at site specific and regional scales
- Coordinate timely access to detailed data from offshore wind monitoring projects for use in assessments

OFFSHORE MOTUS DATA FRAMEWORK

OBJECTIVES:

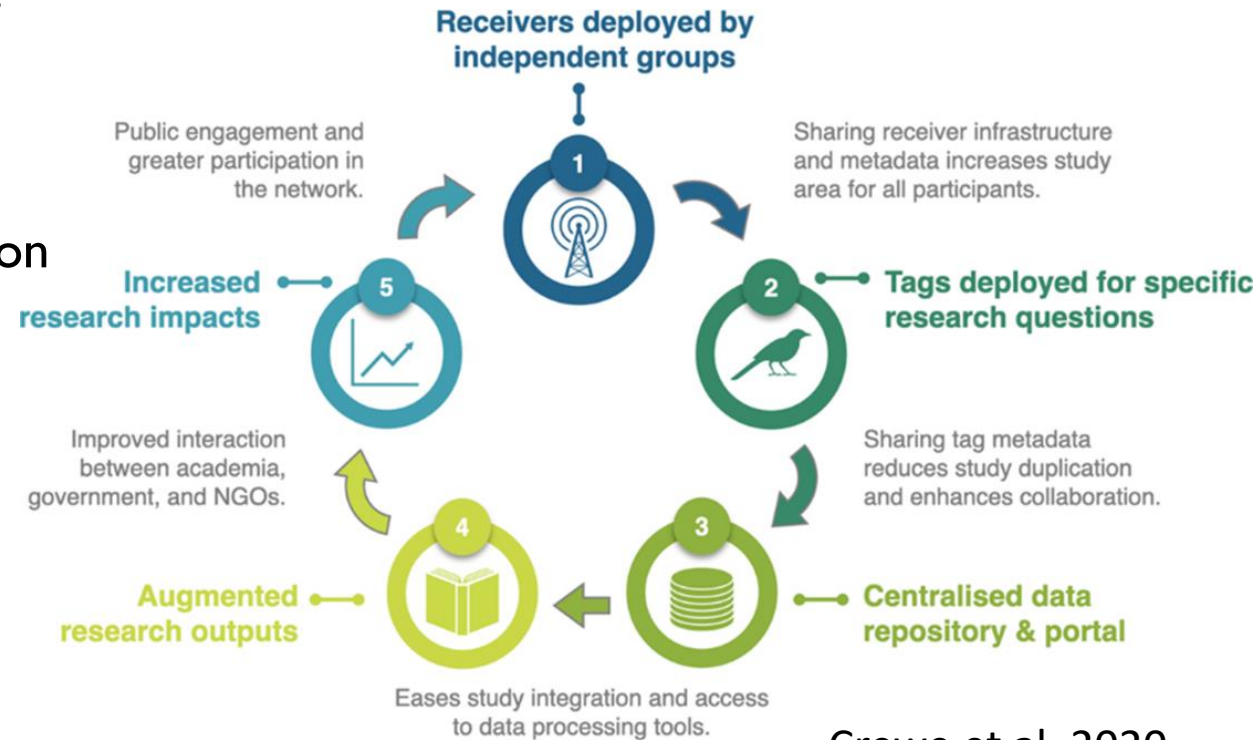

- Develop Atlantic Offshore Wind Assessment Portal (AOWA Portal) within Motus to coordinate information among projects collecting data for offshore wind assessments in the U.S. Atlantic
- Establish minimum standards and centralized data management for various types of data within the AOWA Portal, including: station metadata, calibration data, tag metadata, tag detection data, station health data and station maintenance data
- Develop framework for automated report generation to provide standardized, transparent, and timely summary-level information for offshore wind assessments and other monitoring efforts

Atlantic Offshore Wind Collaborative

Why Join – Why work together?

- use of data management tools available through Motus
- sharing of metadata and detection data, transparency
- a positive feedback loop of information and participation
- broader contribution to conservation science
- permanent data archive
- legislative requirements

JOINING: Atlantic Offshore Wind Collaborative

How to Join:

Step 1 – Register

Step 2 – Create Project

Step 3 – Assign Group

Data sharing

More information about data sharing and attribution can be found in the Motus Collaboration Policy. By registering tags with Motus you have agreed that all summary level data will be open to the public unless specifically exempt.

Use the options below to set your project's data permissions.

Open Data: All tag detections, receiver GPS and activity data will be publicly available for visualization and download. A record of when project data has been accessed, and by who, is available on the project management page.

Open Summary Data: Daily summaries of tag detections, not individual detections, station GPS and activity data will be visible to the public. Motus collaborators that detect your tags on their receivers will have access to your tag detection data on their receivers only. By registering tags with Motus you are agreeing to this level of data sharing unless specifically exempt.

THE MOTUS COLLABORATION POLICY

The Motus collaboration policy is intended to maximize efficacy of Motus data for science, conservation and wildlife and resource management.

By registering a receiver or tag with Motus, collaborators agree to the terms of the policy.

Open Data: All tag metadata, station metadata, and **summary** tag detection data is open and used for public visualization, **download**, and augmented data products.

- Data access is only available for registered collaborators.

collaborators control access to detailed detection data for up to 3 years

PROJECT MANAGEMENT AND REPORTING TOOLS

Manage data > Project "Motus Ontario Array" (#1) --- Switch to another project ---

Manage Project Tool

You have permissions to manage more than one project. Please select which one you would like to modify.

Motus Ontario Array (#1) Select...

- [View your profile](#)
- [Edit your profile](#)
- [Create a project](#)
- [Admin tools](#)
- [Assume a user ID](#)

Manage your project: Motus Ontario Array (#1)

Use the links below to manage metadata associated with your project. Please read each page carefully to ensure your data is collected and managed as intended. Remember, metadata is key to a successful project.

- [Manage project](#) Manage the list of authorized users and permissions for your project (e.g. who can register tags and receivers, upload detection files or download data).
- [Manage Collaborators, Institutions, and Citations](#) Manage the list of authorized users and institutions affiliated with your project.
- [Data issues](#) This project has **156** issues to address.
- [Data Access Log](#) View data access logs for this project.
- [Manage your tags](#) When a tag is affixed to a species you must provide information (date, location etc.) about the deployment here.
- [Manage your receivers](#) Each receiver deployed in the field should be registered with your project as soon as possible.
- [Manage sites and landowners](#) Manage the list of sites, landowners and contact information for your project. Please note that this information is never shared publicly.
- [Download project data](#) Get project data and metadata in a variety of formats.
- [Download detection data](#) Download an SQLite file of your projects tag and receiver detections through R. Full instructions on how to download, filter, and use this file within R are available in the Motus RBook.
- [Upload tag registrations or detection data](#) Use this tool to submit tag registrations or receiver detection files to the Motus database.

The screenshot shows the Motus web interface. At the top, there's a navigation bar with 'Home', 'About', 'Resources', 'Explore Data', and 'Manage Data'. A user profile 'Lucas Berrigan' is visible. Below the navigation, there are tabs for 'Stations', 'Tracks', 'Regions', 'Projects', and 'Species'. The main area features a world map with numerous colored data points. Below the map, there's a section for the 'NANUK' station, which is currently 'INACTIVE'. It displays statistics: 108 animals Detected, 12 species Detected, 13 projects, 4 countries, and 77 detections. There are also buttons for 'Switch station' and a '- More info -' section with various icons. At the bottom, there's a timeline from 2014 to 2020 and a 'Map legend'.

EXPLORE DATA PORTAL

The screenshot shows the 'Explore Data' section of the Motus Wildlife Tracking System. The top navigation bar includes 'Home', 'About', 'Resources', 'Explore Data', and 'Manage Data'. The user 'Lucas Berrigan' is logged in, with language options for EN, FR, and ES. Below the navigation, there are tabs for 'Stations', 'Tracks', 'Regions', 'Projects', and 'Species'. A toolbar with icons for filtering, refreshing, searching, PDF export, and sharing is visible. The main area is a world map with numerous colored dots representing tracking stations, primarily concentrated in North America and Europe. On the left side of the map, there are zoom in (+), zoom out (-), and full screen icons. At the bottom of the map area, it states 'The Motus Wildlife Tracking System is a program of BIRDS OISEAUX' with a small bird icon.

AUTOMATED REPORT TEMPLATES

Station: Cordova

Location: [60.4076, -145.5052](#)

Start Date: April 21, 2021

Report Date: November 09, 2021

Number of species detected: 3

Number of individuals detected: 27

BIRDS CANADA
OISEAUX CANADA

The table below summarizes all tagged animals that have been detected at this station during its operation. In an effort to remove false positives (where background radio static can resemble the signature of a tag) only tags whose signals were detected at least four consecutive times are included in this summary. Click on the link to view more details about each tag deployment on the Motus website, such as where it was tagged, the project that tagged it, as well as an overview of all the other stations that have detected this same tag.

DATA ACCESS, QUALITY ASSURANCE

Data Access	QCAC
The Motus R-Package and Book	<ul style="list-style-type: none">• All data made available to collaborators. Tools and guidelines for data visualize, cleaning, analysis.
Online reporting tools and downloads	<ul style="list-style-type: none">• ‘Public’ summary data screened at a high level for false positives and incorrect data. Heavily dependent on user-defined metadata and management.
Publications	<ul style="list-style-type: none">• Collaborator driven cleaning and analysis. (<i>not currently fed back into the system</i>)
Augmented data products	<ul style="list-style-type: none">• Collaborator driven cleaning and analysis. (<i>not currently fed back into the system</i>)

BREAKOUTS/FEEDBACK

Initial feedback? Did you find the reports easy to read and process? Did any of the aesthetic choices make it difficult for you to understand the report?

Who is the target audience for automated reporting in your organization?

What would you use the reports for? 1) Static, 2) Dynamic

What should be included in dynamic online reports versus the static pdf reports?

Gaps/anything missing?

Short Break – Back at 2:10 ET

Peter Paton, URI

Breakout Groups (2:10 - 2:40 ET):

- Goal: feedback on automated reports (e.g. site specific and regional)
- Reconvene at 2:40 ET with a group discussion on key feedback
- Groups assigned randomly and facilitated by a co-lead on project

Breakout Groups – Report out (2:40 - 2:55 ET)

- **Key feedback**
- **Any other ideas?**

Next steps

- Opportunities for more detailed feedback (spring 2022)
- Offshore Motus projects? Reach out!
- Summary report
- Upcoming workshops: monitoring framework (winter 2022), calibration methods (spring 2022) draft final products (summer 2022)
- Final products – fall 2022

Thank you!

Yves Aubry, ECCC
